Amiga KickSmash 32 - In-system flash EEPROM

Rev 6 2024-11-22

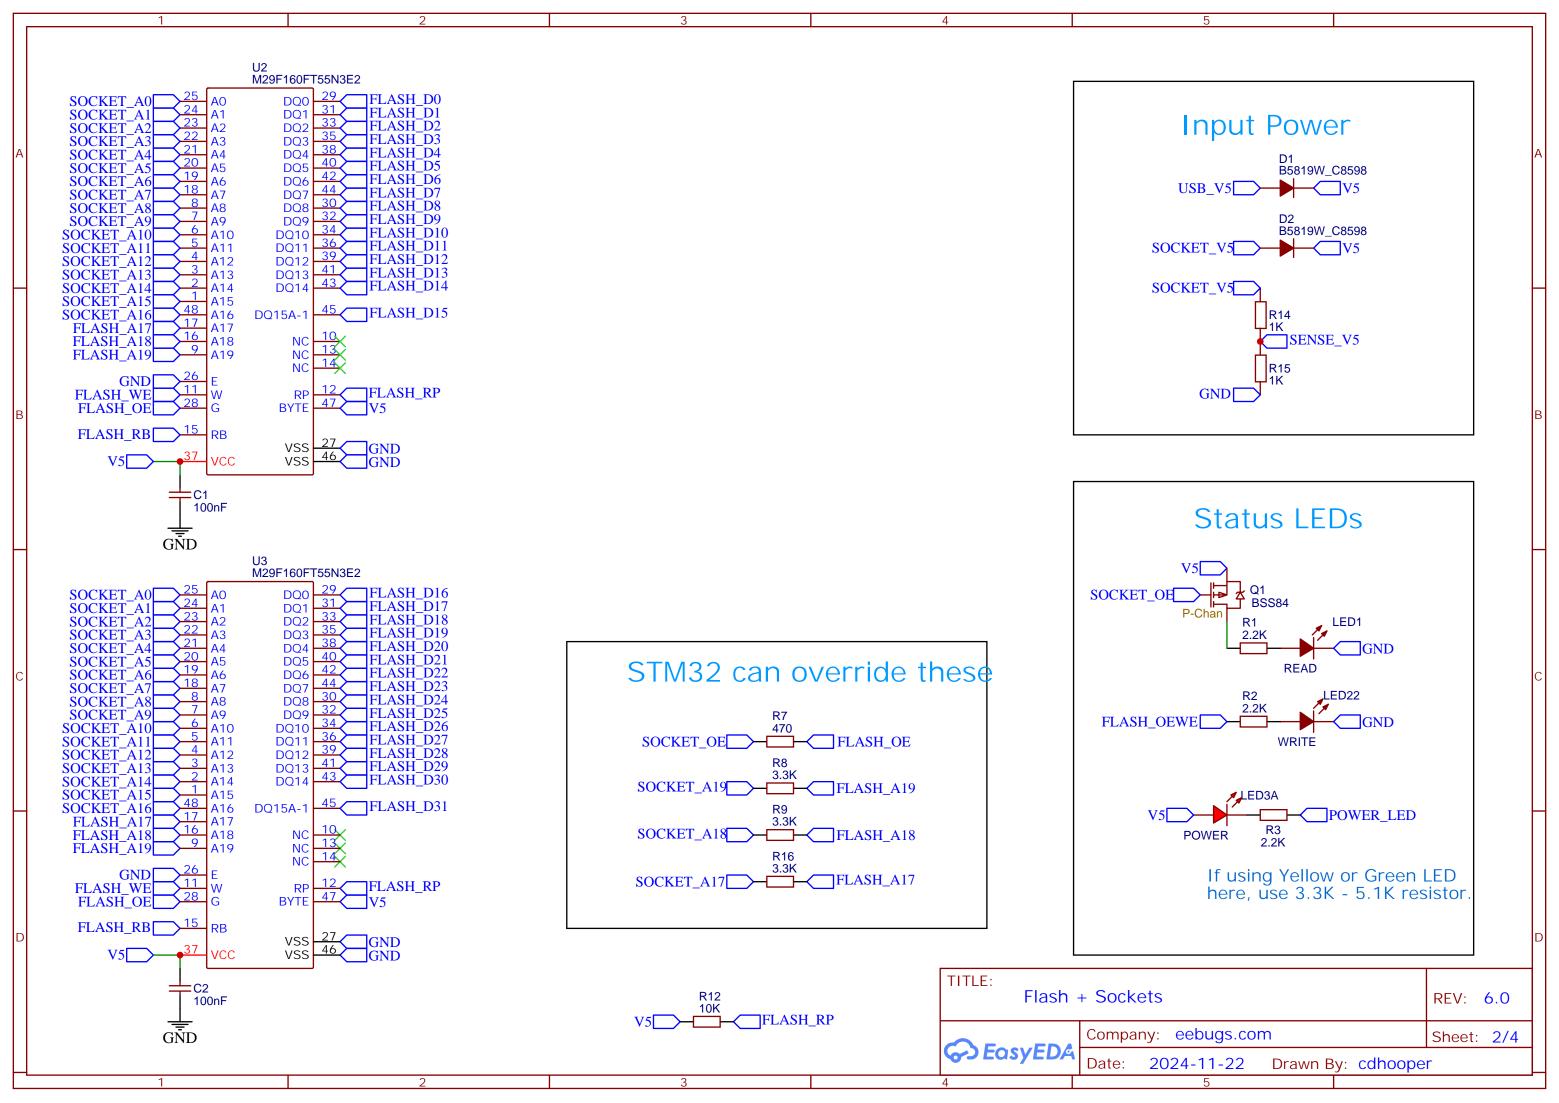

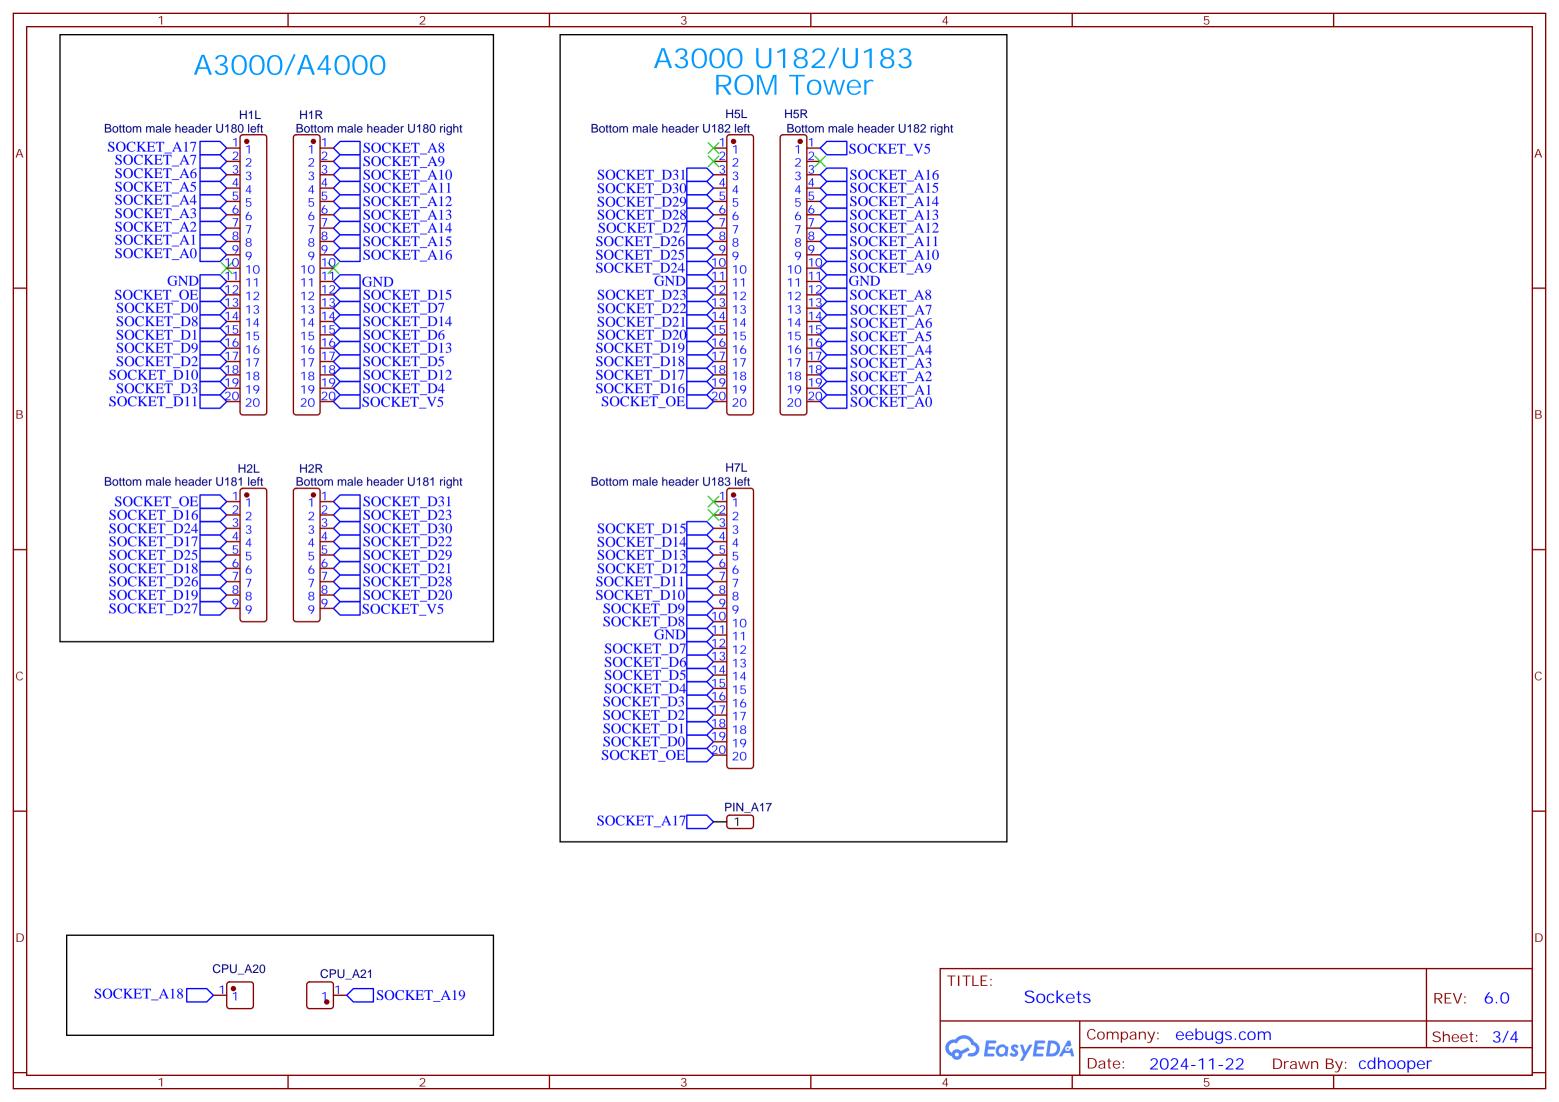

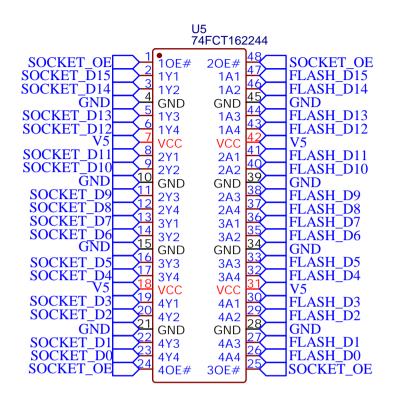

Capture Amiga reset

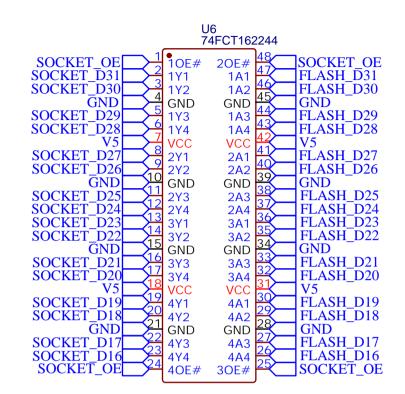

AMIGA_KBRST 1 KBRST

Bus drivers are used to decouple STM32 putting response and flash write data on the bus from when the Amiga CPU does a read.

When FLASH_OEWE is high, FLASH_WE will be driven low when SOCKET_OE is low. Otherwise, FLASH_WE is managed by the STM32. This will allow the Amiga CPU to terminate a flash command write at the end of a bus cycle.
